Profession Summary

A resourceful Full-Stack Developer specializing in building feature-rich web applications with Next.js, PostgreSQL, Ai microservices integration. Passionate about creating practical solutions to real-world problems, with a portfolio of ambitious projects including an AI-integrated educational platform (ProfNobel) and a futuristic developer hub (Neonoid). Leverages a unique background in the life sciences to architect and build innovative, user-centric software.

Technical Skills

- **Languages:** JavaScript, TypeScript, HTML/CSS
- **Frontend:** React, Next.js, Redux, Tailwind CSS, Shadcn/UI, DaisyUI
- **Backend:** Node.js, Express.js, Prisma, Socket.io
- **Databases:** PostgreSQL, MongoDB
- **DevOps & Cloud:** AWS, Google Cloud, Firebase, Vercel, Render, Docker, Git/GitHub
- **AI & APIs:** Google Gemini API, OpenAI API, PDF Parsing, Text-to-Speech (TTS)

Professional Projects Architectural Design, prototype under development

1) ProfNobel - AI-Powered Academic Hub

Live Demo & Code: biooids.com

An all-in-one application designed to organize academic life by transforming static documents into interactive, AI-enhanced learning materials for students and teachers.

- **Engineered** an AI-powered pipeline using **pdf-parse** and the **Gemini API** to convert static PDFs into interactive, queryable documents, enabling students to deeply engage with their study materials.
- **Architected** a scalable PostgreSQL database and multi-tenant backend system using **Prisma** to support distinct student and teacher roles, creating a seamless, end-to-end workflow for assignment creation and grading.
- **Integrated** a Text-to-Speech (TTS) API to enhance accessibility and provide hands-free, auditory learning options for all user-uploaded content.
- **Tech Stack:** Next.js, Node.js, PostgreSQL, Prisma, Google Gemini API, Tailwind CSS.

2) Wanderguild Developer Hub Architectural Design, full stack

Live Demo & Code: biooids.com

A portfolio and project management platform with a unique cyberpunk-inspired UI, designed for developers to showcase their work and document their day-to-day progress.

- **Executed** a unique sci-fi/cyberpunk aesthetic using **Tailwind CSS** and **DaisyUI**, creating a memorable and highly stylized user interface with a focus on sharp, angular design principles.
- **Developed** a core project-tracking feature that allows developers to create daily progress logs with images and tags, transforming a static portfolio into a **dynamic development narrative**.
- **Designed and implemented** a full-stack project management system, handling everything from user authentication to complex data relationships between users, projects, and daily entries.
- **Tech Stack:** Next.js, React, Node.js, PostgreSQL, Tailwind CSS.

3) Do it your self Platform - Architectural Design, full stack

Concept Details: biooids.com

A website for hosting DIY projects and share steps, showcase and also provide resources for where to find those projects

- **Executed** a unique sci-fi/cyberpunk aesthetic using **Tailwind CSS** and **DaisyUI**, creating a memorable and highly stylized user interface with a focus on sharp, angular design principles.

- **Developed** a core project-tracking feature that allows developers to create daily progress logs with images and tags, transforming a static portfolio into a **dynamic development narrative**.
- **Designed and implemented** a full-stack project management system, handling everything from user authentication to complex data relationships between users, projects, and daily entries.
- **Tech Stack:** Next.js, React, Node.js, PostgreSQL, Tailwind CSS.

Education & Professional Development

- **Project-Based Full-Stack Development** (2023 – Present)
 - Continuous, independent learning focused on the MERN stack, Next.js, and advanced database architecture, demonstrated through the successful completion of multiple complex applications.
- **Advanced Level Certificate, Sciences** | Byimana School of Sciences, Rwanda | Graduated: August 2023
 - Principal Subjects: Physics, Chemistry, Biology. This scientific background provides a strong foundation for analytical thinking and a methodical approach to software engineering challenges.
